Ideas Susanne

- 3x Marble Runs
  - 1x marble run to visualize hyperlocal, circular food waste management
  - 1x marble run to visualize municipal composting
  - 1x marble run to visualize no composting (landfill)

Instead of 3x separate marble runs, we could also have one that splits into three different paths. At the restaurant station, people can choose between R2G path, municipal composting path, and trash (landfill).

Susanne Duman

Laser cut marble run:
Marble represents food.
Hyperlocal composting is a closed circle that marble never leaves.
Municipal composting is a marble run that ends at a different location and you have to start over.
Landfill is a marble run that ends at the landfill and the marble disappears (or falls into something at the end that represents release of methane).

The marble runs through different stations (Restaurant, Collection bin, Compost site, Garden, Landfill, etc.)
